

Lawnporn's Buffalo Renovation Guide

Pre-Work – Remove all weeds (either using herbicide or pulling them out manually)

We suggest mowing just on a normal height setting and apply a quality slow release such as Lawnporn 4 Seasons approx 3 weeks before you start. This helps to get your grass going and into a state that's its ready to grow.

Week 1 – if your lawn hasn't grown substantially since the pre work, drop your mower down a notch and mow like normal, and then in different direction (so if you normally mow North-South, then also mow East-West. If it has grown then mow again at normal height.

*important that you avoid mowing more than 1/3 of the grass height at once.

Week 2 - drop your mower down a notch and mow like normal, and then in different direction (so if you normally mow North-South, then also mow East-West.

*make sure you still have green leaf showing after the mow.

Week 3 – repeat weeks 1 & 2 until your lawn height has dropped down to the thatch layer but high enough to still see green leaf.

*once your at your lowest height and if you find you have thatch built up you can rake over the lawn and or hire a machine to gently pick up the thatch but not disturb the plant system heavily as this can cause delays in recovery for buffalo lawns.

Week 4 - If you want to core and top dress, this is the time, do a light top dress so you can still see green leaf.

Week 5 - Apply a repairing and quick release fertiliser Lawnporn launch+ (60ml per 100 sqm)

Week 6 – Apply Moist soil wetting agent (100ml per 100 sqm) and Root builder+Kelp (50ml per 100sqm) separately on different days.

Week 7- Apply a repairing and quick release fertiliser Lawnporn launch+ (75ml per 100 sqm)

Week 8 – Apply pre-emergent herbicide and bug/grub killer treatment (separately on different days)

Week 9 - Apply a repairing and quick release fertiliser Lawnporn launch+ (90ml per 100 sqm)

Week 10 – Apply Moist soil wetting agent (100-300ml per 100 sqm) and Root builder+Kelp (75ml per 100sqm) separately on different days.

From here on you can work with your lawn and manage growth and the look of your lawn by alternating between Launch+ and Greenlight. Continue to apply Moist monthly to assist in water retention and even spread of moisture throughout the root system. You can mix root build and greenlight in the same tank to maintain a stunning deep green while also feeding the root system.
