

**LAWNPNORN**  
**WINTER PROGRAM**  
**JUNE - AUGUST 2020**

# Winter 2020

Welcome to the Lawnporn Winter 2020 program.

This program is for warm-season lawns and is suitable for couch, kikuyu, buffalo and zoysia but not limited to those. Really this program will suit all lawn types however cool-season lawns will require more water, mowing, maintenance and fertiliser due to the fact that in winter these lawn types will grow. The irrigation and care practices such as mowing are geared toward warm-season lawns in this program.

The winter season is not that exciting for warm-season lawns as the cooler weather and lower amount of daylight send the lawn into dormancy. It is important to still care for the lawn however there is reduced need for fertilisation and care practices such as mowing. More emphasis and focus is needed on things that can take away condition from the lawn, such as winter growing weeds.

Depending on the climate in your area, you may still have reasonable growth but it will be much slower than the spring and summer times. Renovation practices such as scarifying and top-dressing should be avoided. Renovation is best left to early to mid-spring, when the growth is more active.

The ideal lawn going into winter is to have it in the best condition before winter. Not everyone is in that boat but no matter how bad your condition is the product recommendations in this program will help. Winter is about survival and lawns in great shape before winter survive better. Fertilisation is still important, but a lower level is required and if your lawn is in bad shape at the start of winter you will only see small improvements using this program over winter. The real benefits of fertilising is that it will improve the condition to survive winter and the big bonus is that you'll come back much better in spring.

Winter for warm season lawns is about attacking the issues, such as weeds, pests and disease. This program has a black beetle (pest) treatment to give you protection throughout the season. Weed treatments vary widely and are not covered in this program. Ideally, you would have used a pre-emergent herbicide in autumn to stop weed germination. Anything that germinates throughout winter will need hand-removal or post emergent herbicides suitable for your lawn type. Check out the problem solver on [www.lawnpornonline.com](http://www.lawnpornonline.com) for some suggestions.

The last few months of winter is your opportunity to service or upgrade your lawn care gear. The lawn may start to look drab but don't panic, that is natural. The lawn lives under the ground, not just on top and it will come back again in spring even if it goes a bit brown. For those that need it green, there are some tricks like Instagreen by Lawnporn but aim for condition rather than camouflage would be my suggestion.

# JUNE

## Day 1

Moist 100mL  
History 8 -12mL  
Four Seasons 2kg  
per 100m2

Tank-Mix Moist Soil Wetter 100mL with History Insecticide 10mL .

Spray and then spread down 2kg of Four Seasons immediately after the spray treatment.

Water in immediately, approximately 30mins with sprinkler or hose.

**Watering**  
Once Every 7-10 days  
deeply in Early Morning

**Mowing**  
Once a Fortnight  
or as required

## Week

**1** Launch+ 70mL  
Root Builder+ 70mL  
per 100m2

Tank-Mix Launch+ 70mL with Root Builder+ 50mL

Apply 6 hours or more after mowing. Do not mow within 6 hours after treatment.

Do not irrigate within 6 hours after treatment.

**Watering**  
Once Every 7-10 days  
deeply in Early Morning

**Mowing**  
Once a Fortnight  
or as required

## Week 2

Charger 200mL  
Root Builder+ 50mL  
per 100m2

Tank-Mix Charger 200mL with Root Builder 50ml

Apply 6 hours or more after mowing. Do not mow within 6 hours after treatment.

Do not irrigate within 6 hours after treatment.

**Watering**  
Once Every 7-10 days  
deeply in Early Morning

**Mowing**  
Once a Fortnight  
or as required

## Week 3

Launch+ 50mL  
Root Builder+ 50mL  
per 100m2

Tank-Mix Launch+ 50mL with Root Builder+ 50mL

Apply 6 hours or more after mowing. Do not mow within 6 hours after treatment.

Do not irrigate within 6 hours after treatment.

**Watering**  
Once Every 7-10 days  
deeply in Early Morning

**Mowing**  
Once a Fortnight  
or as required

## Week 4

Green Light 200mL  
Root Builder+ 50mL  
per 100m2

Tank-Mix Green Light 200mL with Root Builder+ 50mL

Apply 6 hours or more after mowing. Don not mow within 6 hours after treatment.

Do not irrigate within 6 hours after treatment.

**Watering**  
Once Every 7-10 days  
deeply in Early Morning

**Mowing**  
Once a Fortnight  
or as required

# JULY

## Day 1

Launch+ 50mL  
Root Builder+ 50mL  
per 100m2

Tank-Mix Launch+ 50mL with Root Builder+ 50mL

Apply 6 hours or more after mowing. Do not mow within 6 hours after treatment.

Do not irrigate within 6 hours after treatment.

### Watering

Once Every 7-10 days  
deeply in Early Morning

### Mowing

Once a Month  
or as required

## Week 1

Charger 200mL  
Root Builder+ 50mL  
per 100m2

Tank-Mix Charger 200mL with Root Builder+ 50mL

Apply 6 hours or more after mowing. Do not mow for at least 6 hours after treatment.

Do not irrigate within 6 hours after treatment.

### Watering

Once Every 7-10 days  
deeply in Early Morning

### Mowing

Once a Month  
or as required

## Week 2

Launch+ 50mL  
Root Builder+ 50mL  
per 100m2

Tank-Mix Launch+ 50mL with Root Builder+ 50mL

No need to water in immediately after treatment.  
Do not mow for 24 hours after treatment.

Do not irrigate within 6 hours after treatment.

### Watering

Once every 7-10 days  
deeply in Early Morning

### Mowing

Once a Month  
or as required

## Week 3

Charger 200mL  
Root Builder+ 100mL  
per 100m2

Tank-Mix Charger 200mL with Root Builder+ 100mL

No need to water in immediately after treatment.  
Do not mow for 24 hours after treatment.

Do not irrigate within 6 hours after treatment.

### Watering

Once every 7-10 days  
deeply in Early Morning

### Mowing

Once a Month  
or as required

## Week 4

Launch+ 500mL  
Root Builder+ 50mL  
per 100m2

Tank-Mix Launch+ 100mL with Root Builder+ 100mL

No need to water in immediately after treatment.  
Do not mow for 24 hours after treatment.

Do not irrigate within 6 hours after treatment.

### Watering

Once every 7 - 10 days  
deeply in Early Morning

### Mowing

Once a Month  
or as required

# AUGUST

## Day 1

Four Seasons 2kg  
per 100m<sup>2</sup>

Spread evenly Four Seasons over your area.  
Irrigate immediately with on average 30 mins with your sprinkler.

A quick pitchfork before using is advisable. The application of Four Seasons here is strategic, to assist rapid recovery from renovation, which is about 6-8 weeks away.

**Watering**  
Once every 7 - 10 days  
deeply in Early Morning

**Mowing**  
Once a Month  
or as required

## Week 1

Launch+ 70mL  
Root Builder+ 70mL  
per 100m<sup>2</sup>

Tank-Mix Launch+ 70mL with Root Builder+70mL

No need to water in immediately after treatment.  
Do not mow for 24 hours after treatment.

Do not irrigate within 6 hours after treatment.

**Watering**  
Once every 7 - 10 days  
deeply in Early Morning

**Mowing**  
or as required

## Week 2

Charger 300mL  
Root Builder+ 80mL  
per 100m<sup>2</sup>

Tank-Mix Charger 200mL with Root Builder+80mL

No need to water in immediately after treatment.  
Do not mow for 24 hours after treatment.

Do not irrigate within 6 hours after treatment.

**Watering**  
Once every 7 - 10 days  
deeply in Early Morning

**Mowing**  
or as required

## Week 3

Launch+ 80mL  
Root Builder+ 80mL  
per 100m<sup>2</sup>

Tank-Mix Launch+ 80mL with Root Builder+80mL

No need to water in immediately after treatment.  
Do not mow for 24 hours after treatment.

Do not irrigate within 6 hours after treatment.

**Watering**  
Once every 7 - 10 days  
deeply in Early Morning

**Mowing**  
or as required

## Week 4

Charger 300mL  
Root Builder+ 100mL  
per 100m<sup>2</sup>

Tank-Mix Charger 200mL with Root Builder+ 100mL

No need to water in immediately after treatment.  
Do not mow for 24 hours after treatment.

Do not irrigate within 6 hours after treatment.

**Watering**  
Once every 7 - 10 days  
deeply in Early Morning

**Mowing**  
Once a fortnight  
or as required

## Water

The best watering practice is done deeply, early in the morning and infrequently. This is done for many reasons to aid plant health and conserve water. Deep watering (about the time it takes to fill a 94g empty tuna can under a sprinkler) done infrequently will train the roots to grow deeper. Early morning watering will evaporate less and not have water sitting on grass overnight which can cause fungus. Smart irrigation systems are well worth the investment and can save you water and money.

## Mowing, the 1/3 rule and Mowing Height

Mowing is a cultural practice to look after lawn. Aim to mow before the lawn gets too long and mow no more 1/3 of the grass height in a single mow because you may get scalping.

Mowing height differs between grass types and personal preference. Changing heights for seasons is a good practice. Cooler season heights compared to warm season heights are taller to get better photosynthesis from the sun available on shorter days and block sunlight to choke weeds.

## Aerating

Aerating is a cultural practice to look after lawn by looking after the soil. Lawn will not grow well in hard soil and soil that is compact will not let air, water and nutrients to get to the roots easily.

During Autumn it is a great time to aerate while there is active growth but as the season gets cooler, a solid tine (or pitchfork) will be preferred over an aerator that pulls out a core with a hollow tine due to the less impact and repair needed for the lawn to recover.

## Top Dressing

Top Dressing is a cultural practice to look after the lawn by replenishing the top layer of soil with a sand or sandy loam. Done during warmer months it will require active growth for the lawn to grow in hence, topdressing in autumn must be done in March and at a very thin level.

Top dressing is used to level up the lawn area. If you have severe levelling issues you may have to wait to next growing season (September - March) to remedy that.

## Fertiliser & Lawn Care Products for Lawns in poor condition.

Lawn that is in poor condition is a complex task to repair but you can simplify this by prioritising fixing the ground first as no products will work in hard ground. Aerate and revitalise.

Next, treat weeds with suitable herbicides for your grass type and also treat any pest or disease issues. You can look to our problem solver on [www.lawnpornonline.com](http://www.lawnpornonline.com). or visit the programs and tips section. Our products work best in well managed soil and good lawn care practices.

## Turf Heights

### Warm Season Grasses

Couch: 5 - 30mm

Zoysia: 5 - 30mm

Kikuyu: 10 - 35mm

Buffalo: 15 - 50mm

### Cool Season Grasses

Fescue 3cm - 5cm

Rye 2cm - 4cm

Healthy lawn outside recommended range is achievable with proper turf management.

## Mow with sharp blades

## Follow the 1/3 rule

## Don't mow wet lawn

## Mow taller during cool season

## Product Description

**Lawnporn Green Light** is a professional foliar fertiliser designed specifically to encourage a deep green colour and growth. The inclusion of iron (Fe) helps get the nutrient into the plant quickly, resulting in rapid and lasting greening effect. Based on the same formulation as Australia's most widely used nitrogen (N) and iron (Fe) fertiliser, Green Light, in one form or another, is used regularly on some of Australia's most prominent golf courses and sporting facilities, typical uses for this product include tournament preparation in golf courses, and prior to televised games in sports facilities. On the home lawn, Green Light is ideal for use before a BBQ or any time when you want to get your patch looking its best.

**Lawnporn Launch+** is a professional grade foliar fertiliser designed to be applied to the foliage (or leaf) of your turf. While designed for use throughout the year, Launch+ is best suited to use during times when turf root development is required. The high amount of phosphorus (P), plant available zinc (Zn) and inclusion of kelp concentrate, all act to stimulate root growth. Ideal uses include during seed establishment, following renovation or scarring, or when recovery is required on injured or stressed turf.

**Lawnporn Moist Wetting Agent** Professional turf managers will rely on high quality wetting agent products like Lawnporn Moist to get them through spring and summer. While it's name sounds a little silly, Lawnporn Moist is a serious wetting agent. Made of a 100% blend of surfactant compounds, Moist is specifically balanced to provide multi-action wetting agent activity in the soil; improving water penetration, moisture retention and distribution within the soil, keeping precious water at the root zone for longer. The result is a not only a more resilient lawn through a long, hot summer, but also a lawn that grows more evenly due to the elimination of wet and dry spots that cause varying growth rates.

**Lawnporn Root Builder +** Highly concentrated kelp extract sourced from South Africa, considered the Australian turf industry's best. Many people have heard that some kelps contain plant hormones vital for growth, with a high auxin to cytokinin ratio (300:1). Lawnporn Root Builder+ is designed to stimulate root growth without impacting leaf growth. When used in conjunction with fertilisers such as Launch+ or Green Light, there is no better way to get the turf roots moving.

**Lawnporn Four Seasons** is the style of fertiliser used by professional golf course and sportsfield professionals, designed to provide rapid and prolonged plant growth and greening effect. Controlled release nitrogen (N) and potassium (K) will continue to feed the lawn for up to 12 weeks.

**Charger** is specifically formulated to promote lateral turfgrass growth as well as enhance colour. The unique blend of macro and minor nutrients and hormone growth promoters maximises the developmental potential of the turfgrass resulting in more rapid establishment, grow in, or recovery from damage or renovation. Charger also maintains growth and colour of warm season grasses during cooler months.

**History** is a systemic insecticide. A professional turf solution for the control of African Black Beetle , Argentinean Scarabs and Billbugs Larvae . The active ingredient, Thiamethoxam works through systemic action.

**Insta-Green Turf Pigment (250mL)**  
A professional turf colourant for a stadium quality finish.

- Long lasting natural green colour for a stadium quality finish
- Improve turf colour during dormancy or after renovation
- Tank mix with herbicides to improve application accuracy
